PATIO HEATERS

MODEL A-270

For over 30 years Sunglo™ outdoor patio heaters have offered the quality and features customers have come to expect. Sunglo™ heaters work like the sun by utilizing radiant heat to warm people and objects without heating the surrounding air. The radiant heat quietly and efficiently provides outdoor warmth for you, your family and friends.

Colors and Finishes

Our popular Model A270 offers the ease and convenience of a fully self-contained portable heater. A five gallon propane tank will provide enough fuel for 8-10 hours of continuous use. Colors and finishes including silver-gray, white, forest green, and stainless steel. All Sunglo heaters are constructed of corrosion-resistant materials and coatings.

DSI Ignition

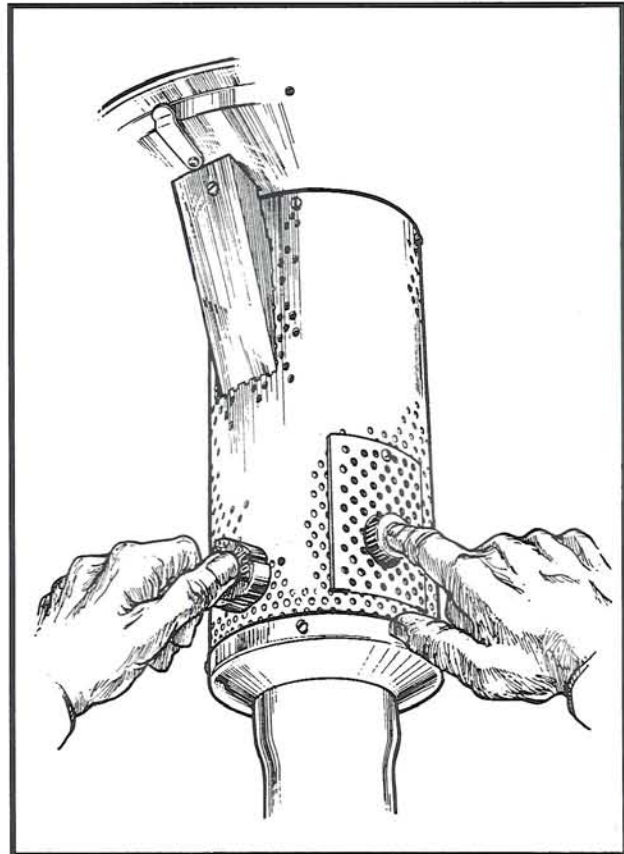

The optional DSI ignition system provides easy lighting with just a touch of a finger. A single AA battery is all that is needed for 100 easy lights. Removable access panel makes battery replacement a cinch.

Coverage, Comfort and Safety

Each Sunglo heater will cover, on average, a 15 foot diameter area, raising peoples' comfort level 5-10°. Exposure to windy conditions will reduce the coverage accordingly. For semi-exposed areas we recommend 12 foot spacing between heaters. The safety system may automatically shut down the heater when exposed to direct winds over 10 mps.

Other Models Available

Sunglo heaters are also available for natural gas. Installation options include permanent post, portable post and suspended mountings.

The DSI Ignition lights your Sunglo heater with the touch of a finger.
